Requirements Gathering Report

Interactive Speech & Language Platform for Children

1. Project Overview

Our project is an interactive speech and language platform designed to help children .practice their communication skills through engaging activities and gamification

The platform connects three main users: **Children, Parents, and Speech Therapists**. The therapist can monitor each child's progress, set individual goals, and assign activities based on their needs, while children can practice at home in an enjoyable and motivating .environment

The platform aims to extend the impact of speech therapy beyond the therapy session and .make structured practice more accessible to children and families

---

2. Project Goals

Make speech practice more engaging and motivating for children.

1. Extend speech practice beyond the therapy session into the home.
2. Support personalized and therapist-guided activities.
3. Help parents understand and follow their child's progress.
4. Provide accessible speech-practice resources, especially for children who have limited access to qualified specialists.
5. Encourage children to practice consistently through gamification and rewards.

---

3. Stakeholder Analysis

User	Role	Main Needs
Child	Practices speech and language activities.	Simple activities, fun interactions, rewards, and clear progress.
Parent	Supports the child and follows their progress.	Easy onboarding, activity visibility, progress summary, and guidance.

Speech Therapist	Assesses, plans, assigns activities, and monitors progress.	Child profiles, goals, activity management, results, and progress tracking.

---

4. User Journeys

4.1 Parent Journey

Discover Platform

↓
View Children
↓
Review Child Information / Assessment
↓
Set Goals
↓
Create or Select Activities
↓
Assign Activities
↓
Review Results & Progress
↓
Adjust Plan
↓
Assign Next Activities

---

5. Core Product Loop

Assess → Plan → Practice → Track → Review → Adapt → Repeat

The core product loop connects the therapist's professional guidance with the child's daily practice.

The therapist sets goals and assigns activities, the child completes the activities, the system records the results, and the therapist uses the progress data to adapt the child's plan and assign the next activities.

---

6. User Stories.

6.1 Parent

User Story 1

> As a parent, I want to add my child's information and needs so that the platform can provide an appropriate starting experience.

User Story 2

> As a parent, I want to view my child's activities and progress so that I can support their practice at home.

6.2 Speech Therapist

User Story 1

> As a speech therapist, I want to set goals and assign activities to each child so that their practice matches their individual needs.

User Story 2

> As a speech therapist, I want to review a child's activity results and progress so that I can adjust their plan and assign suitable next activities.

---

7. Functional Requirements

7.1 Parent Requirements

The system should allow parents to:

- Create an account and log in.
- Create and manage a child profile.
- Provide basic child information during onboarding.
- Provide basic information about the child's needs.
- View assigned activities.
- View the child's completed activities.
- View the child's progress.
- Follow the child's learning journey.

7.2 Child Requirements

AcceThe system should allow children to:

- ss their profile.
- View assigned or available activities.
- Start an activity.
- Complete an activity.
- Receive points, badges, or other rewards.

- View their progress.
- View achievements.
- Continue practicing through daily activities.

7.3 Speech Therapist Requirements

The system should allow therapists to:

- Create and manage a therapist account.
- View connected children.
- View child profiles.
- View assessment information.
- Set individual goals for each child.
- Create or select activities.
- Assign activities to specific children.
- Review activity results.
- Monitor child progress.
- Adjust goals or activities based on the child's performance.
- Assign new activities based on progress.

---

8. Non-Functional Requirements

Usability

The platform should be simple and easy to use, especially for children.

Accessibility

The interface should use readable typography, clear contrast, understandable icons, and simple interactions.

Performance

Activities, dashboards, and progress information should load efficiently.

Responsiveness

The platform should work properly across desktop, tablet, and mobile screen sizes.

Security & Privacy

Children's personal and therapy-related information should be handled securely and protected from unauthorized access.

Reliability

Completed activities and progress data should not be lost after refreshing the page or logging out.

Consistency

The platform should maintain consistent components, layouts, and interaction patterns across all user experiences.

---

9. Recommended MVP Scope

For the graduation project, the MVP should focus on the core experience rather than implementing the entire commercial platform.

Child

- View activities
- Complete activities
- Gamification and rewards
- Basic progress tracking

Therapist

- View children
- Set goals
- Create/select activities
- Assign activities
- Review progress

Parent

- Create child profile
- View assigned activities
- View progress

Core MVP Flow

Therapist Assigns Activity
↓
Child Practices

↓
Results Are Recorded
↓
Therapist Reviews Progress
↓
Therapist Adapts the Plan
↓
New Activities Are Assigned

---

10. Key Product Opportunity

Our opportunity is not simply to create another speech-therapy activity platform. Instead, we aim to combine:

Therapist Guidance + Child Engagement + Gamification + Home Practice + Progress Tracking

into one continuous experience.

The platform does **not replace the speech therapist**. Instead, it helps extend the therapist's impact beyond the therapy session and makes practice more accessible, engaging, and personalized for children.
